

Basic Principles of Modern Adhesion: An Intimate Connection

Jeff T. Blank, DMD, PA

Private Practice

Adjunct Instructor, MUSC College of Dental Medicine

This seminar will de-mystify the role of both total-etch and self-etching systems and illustrate pharmaceutical and histological reactions which affect their proper use. A scientific-based protocol for each system will be presented and issues such as post-operative sensitivity, “how wet is wet” and direct and indirect applications will be discussed.
